

## 智慧垃圾桶

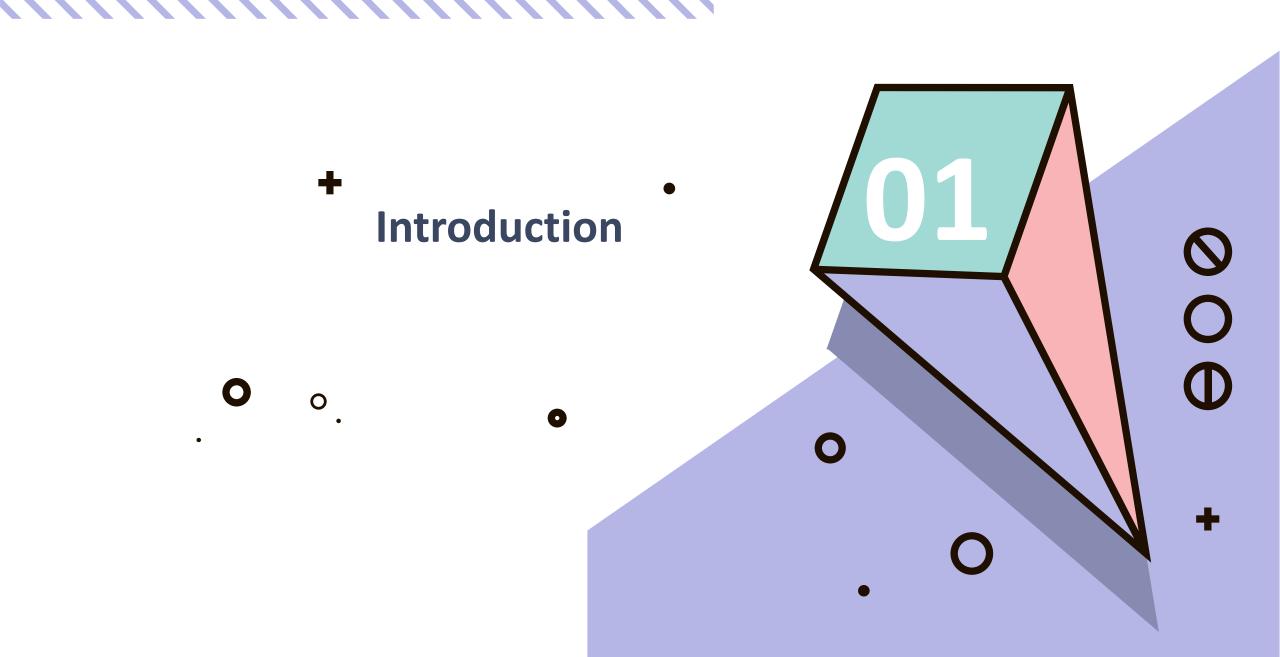

資工三 4106056017 劉易鑫

- ◆ Introduction
- **♦** DIY
- ◆ 程式碼

垃圾桶上的掀蓋常常都會有黑黑的污漬,實在是很不想碰到它,也不知道那些黑黑的是什麼東 西,真的蠻噁心的......

那就來做一個可以自動掀蓋的垃圾桶,這樣一來我就不會碰到它啦!!!

## ◆材料

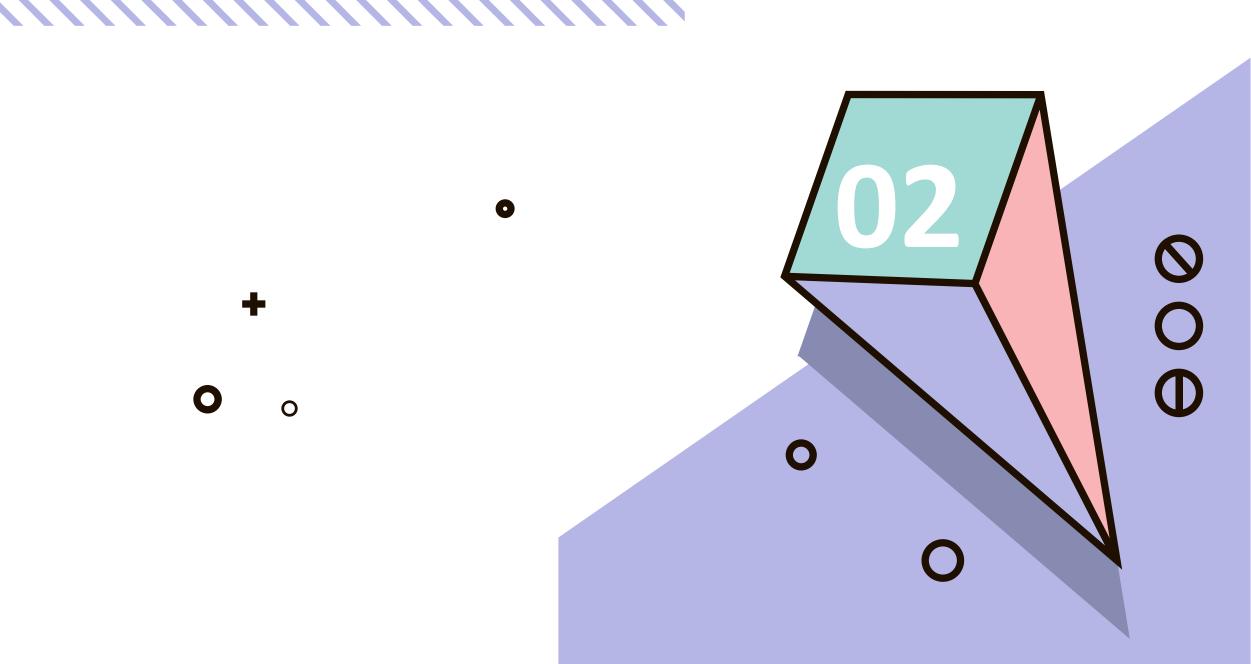

SG90 伺服馬達X1及其零件組

掀蓋式垃圾桶 x1

帶蓋帶開關12V電池盒 x1

將伺服馬達葉片弄成這樣,並繫上線

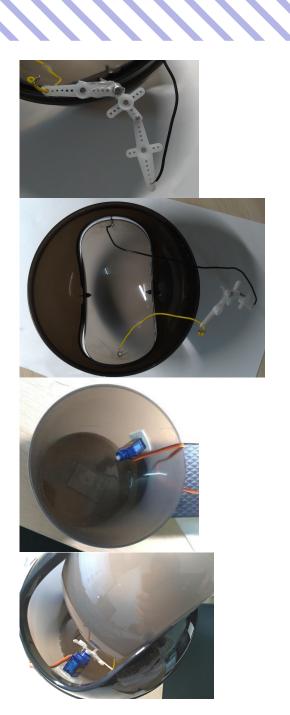

垃圾桶掀蓋挖洞並繫上方才的線

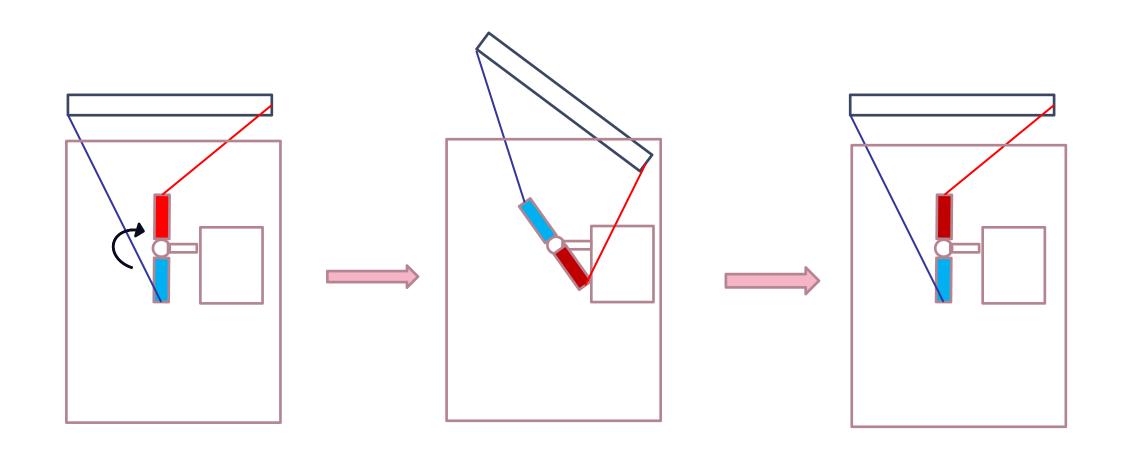

將伺服馬達裝在垃圾桶側內

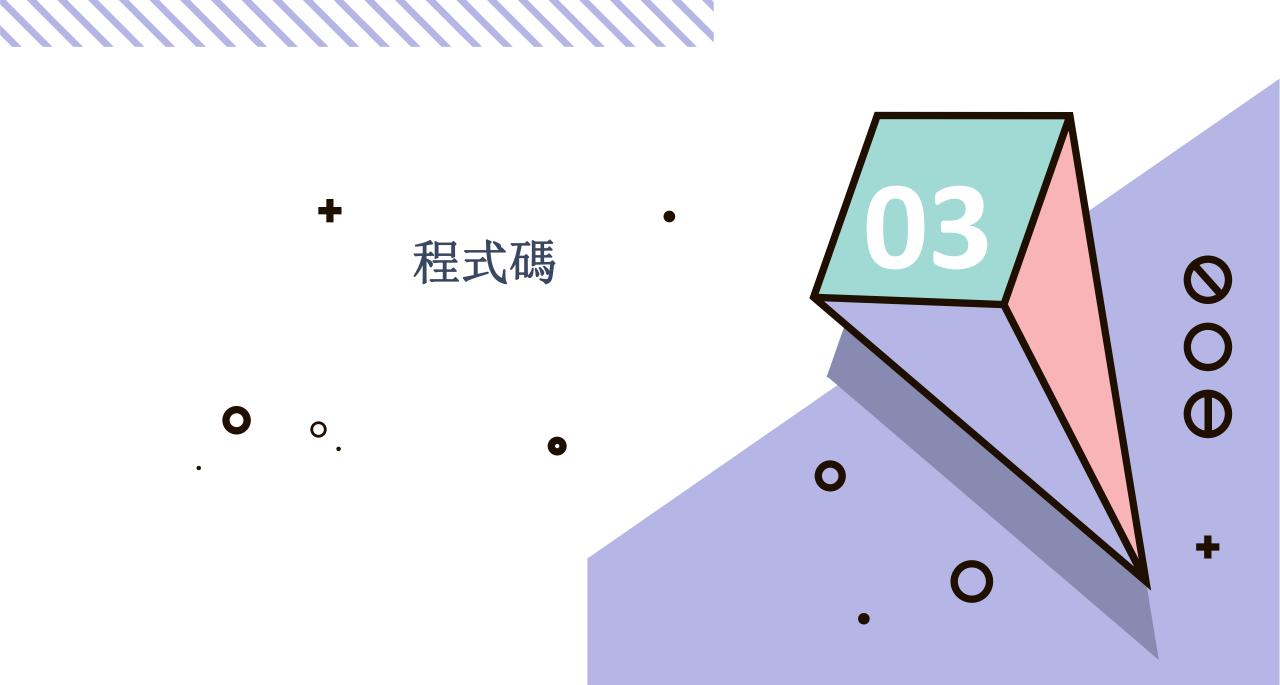

將葉片和馬達接在一起

◆自動掀蓋原理

```
1 #include < NewPing.h>
2 #include <Servo.h>
 3
 4 #define TRIG PIN 12 // trigger Pin
5 #define ECHO_PIN 11
                                // Echo Pin
 6 #define MAX DISTANCE 200 //公分計算
8 NewPing sonar (TRIG PIN, ECHO PIN, MAX DISTANCE);
9 Servo myservo;
10 char ch;
11 int pos = 0;
12 int cm = 0;
13 int delay time = 500;
14
15 void setup() {
                                // 開啟串列埠顯示 p:
16 Serial.begin(115200);
17 }
```

## **♦** loop

```
20 void loop() {
    // 等待 50 毫秒,需大於前程式說明的:
21
22
23
    unsigned int uS = sonar.ping();
                                           送出 ping,並取得微秒 microseconds(uS) 時間
24
    cm = sonar.convert cm(uS);
25
26
    if ( cm >= 3 && cm <= 20 ) {
27
      myservo.write(180);
                           // 告訴
28
      delay time = 3000;
29
30
    else if ( ( cm < 3 | | cm > 20))
31
      myservo.write(30); // 告訴 s
32
      delay time = 50;
33
34
    Serial.print (pos);
35
    delay(delay time);
36 }
```
